INVEST GROUP

# Solutions for industrial and municipal clients

WEST Invest Group is a rapidly growing family business and a multi-branch company with more than 60 years of history.

Our Group companies offer water treatment, energy and technology solutions for industrial and municipal clients. In addition, they offer services related to their own industries, including project planning, customer-focused delivery solutions and installation, service and maintenance.

WEST Invest Group's sister company Filter Group offers energy and water solutions and services in several European countries.

Together, our Group companies form a unique product and service package for the benefit of our clients. We are active in industries where, together with our partners, we can secure functions that are critical to society.

## **A sustainable operating model as a success factor**

Family ownership is truly long-term by nature. The Viiala family owns 100% of all shares, and ownership is today concentrated in the hands of the third generation of the Viiala family, Harto Viiala and Harriet Viiala.

Long-term decisions that support development are characteristic of a family business. A responsible and sustainable way of working is one of the key success factors for a family business, creating the conditions for the company's development for generations to come.

All Group companies are guided by our Code of Business Conduct, which creates the basis for our sustainable business. We also require our partners to conduct their own activities in accordance with these business principles.

In all our activities, we actively strive to develop our sustainability and ensure that we are an even more responsible partner for our stakeholders. Although our journey towards systematic and reportable sustainability work is in the early stages, we are progressing steadily and systematically towards our goal.

Hyxo Oy offers technical and project planning solutions for water treatment. In addition, it imports high-quality water treatment, process and laboratory technology, as well as process meters from leading international suppliers.
